Myself

I am a 24 year old computer science engineer student with a specialization in artificial intelligence. I'm a fast learner, and I like being active in my spare time. I have played football since age six, and I'm currently playing for NTNUI. I chose computer science because I have always been interested in computers, and always enjoyed subjects like math and physics. I grasped programming quickly, as I found it both fun and challenging.

Education

- 2013–2018 **Masters Degree** Computer Science Engineer Norwegian University of Science and Technology, NTNU
Specialization in Artificial Intelligence
Five-year study of computer science, and a specialization in artificial intelligence after two years. Master thesis about deep learning for NLP, specifically for question answering systems and active learning.
- 2016–2017 **Exchange Student** University of California, Santa Barbara
Full year abroad in California, Santa Barbara, on my fourth year of studies. Involved a lot of project works, and more social interaction between students and teachers because of the small class sizes.

Experience

Full Time

- 2012 – 2013 **Benterud Skole (Primary School)** Benterud Skole, Lørenskog
Teaching Assistant, Daycare worker, Substitute Teacher
Worked at a primary school mainly as a teaching assistant for kids with difficulty in learning, or just helping the teacher out with smaller tasks. I sometimes substituted for teachers in different subjects. Finally, I also worked in the daycare for pupils up to the fourth grade.
Experiences:
- Being patient and creative whilst teaching others
 - Promote good behaviour and generally being a good role model
 - Being professional and honest when interacting with parents and teachers

Part Time

- 2010 – 2012 **Losby Gods** Losby Gods, Lørenskog
Service Employee
Worked as a waiter in both bigger events as weddings and also á la carte in the restaurant. Involved a lot of interaction with customers and co-workers.
Experiences:
- "The customers always right" - Treating the customer in such a manner
 - Working under a person in charge, respecting orders
 - Still being able to smile after 12 hours at work

Summer Internships

2016 & 2017 **Statnett SF**

Oslo Nydalen

Summer Intern

Two-part job. Measured grounding in high-voltage tower-pylons, and their capability of leading potentially harmful current away from the tower and safely into the ground. The second part was to plan and draw grounding for new tower areas. This consisted of measuring the relative earth resistivity, and drawing sketches of the area the tower. We then added sufficient grounding to the drawings, according to the measurements we got, along with the general topography of the area. Most of the work were done on-site, on different high-voltage lines around the country.

Responsible for training another team the second year, joining them for a week and supervising their work.

Experiences:

- Working in a large-scale company under a leadership
- Closely work in teams of two, most of the summer
- Carry out professional work which adhered to the standards of Statnett SF
- Plan day-to-day work, in order to meet the agenda set by Statnett SF

Interests

professional: Programming, artificial intelligence, deep learning, software development, computer graphics

personal: Football, guitar, exercise, music, computers
